SUMMARY

I am a passionate and hardworking Information Technology student currently pursuing my B.Tech at Kalasalingam Academy of Research and Education (2022- 2026 batch). With strong technical skills in programming, machine learning, web development, and mobile app development, I enjoy building innovative solutions that solve real-world problems. Through projects like the Women's Safety App, Email Spam Detection System, Smart Meter, and SHEMS, I have demonstrated creativity, technical ability, and a commitment to sustainable and impactful technology. I am eager to learn, adapt quickly, and contribute meaningfully to the teams and organizations I work with.

Education

B.Tech in Information Technology, <i>Kalasalingam Academy of Research and Education (KARE)</i> Batch: 2022-2026 (Currently in 4rd Year) Cgpa :7.01	06/2022 – present KeishnanKoil, India
Senior Secondary School, TNC Jr Collage Percentage - 64%	06/2020 – 04/2022 Kovur, India
Secondary School, St'Pauls EM High School Percentage - 82%	06/2019 – 04/2020 Kovur, India

Technical Skills

Programming Languages

Python, Java, C

Web Development

HTML, CSS, JavaScript, PHP

Data Visualization

Matplotlib, Plotly, Dash

Tools & Platforms

Google Colab, Git, Firebase, MySQL

Mobile App Development

Flutter (Basics)

Version Control

GitHub

Projects

Women's Safety App

- Developed a mobile application focused on women's safety featuring shake detection, emergency call, and SMS alert functionalities.
- Designed a minimalistic and responsive UI for quick emergency responses.
- Implemented location sharing and quick access buttons using Android Studio and Firebase backend.
- Submitted this work to the ICICCS-2025 International Conference.

Email Spam Detection System

- Designed a spam email detection model using machine learning techniques.
- Proposed a star-based algorithm to distinguish between genuine human interactions and bots.

- Applied text preprocessing, feature extraction (TF-IDF), and classification algorithms for accuracy improvement.
- Performed comparative analysis with existing spam filters.

Smart Home Peak Usage Alert System

- Developed a system to monitor and alert users when high-load appliances are used during peak hours.
- Created an Artificial Neural Network (ANN) model to predict energy consumption based on traffic load values.
- Implemented real-time alerting and energy-saving recommendations to reduce electricity bills.
- Visualized energy usage data using matplotlib.

SHEMS (Smart Home Energy Management System)

- Designed and developed a software-only Smart Building Energy Management System for the KARE campus.
 - Integrated occupancy-based automation and ANN-based consumption prediction.
 - Developed a mobile and web application for centralized control and monitoring.
 - Generated real-time email alerts when consumption crossed predicted values.
- Aligned the system objectives with Sustainable Development Goals (SDG) 7, 9, 11, 12, and 13.

Course Activities

Coursework

- Completed coursework on Data Structures and Algorithms, Database Management Systems, and Operating Systems.
- Practical exposure to Cloud Computing Basics and Mobile App Development Fundamentals.
- Participated in AI-ML workshops organized by the University.

Projects

- | | |
|----------------------------|---|
| • Participant, Hackare 2.0 | • Python Development Internship, OctaNet Service Pvt. Ltd |
| • Participant, AI Forg | |

Assignments and Activities

Assignments and Activities

- Developed mini-projects in Web Technologies (Login Authentication System, Simple Portfolio Websites).
- Implemented Database Management Applications using MySQL and PHP.
- Contributed to group coding challenges and Hackathons at the University level.
- Regular contributor to GitHub repositories with small open-source projects.
