PROJECTS

Student Attendance System Using Machine Learning

Developed an automated attendance system using Facial Recognition and Convolutional Neural Networks (CNNs). The system registers students via their unique facial features and automatically marks attendance in real-time.

BMI Index and Calorie Calculator Using SpaCy

Created a BMI index and calorie calculator that processes user inputs using Natural Language Processing (NLP) with SpaCy. It calculates BMI, recommends daily caloric intake, and offers personalized health suggestions.

Human Action Recognition (HAR) for Exercise Repetition and Pose Correction

Built a Human Action Recognition (HAR) system using LSTM and Pose Estimation models to track exercise repetitions and correct user posture. The system provides real-time feedback on exercise form for improved safety and performance.

CERTIFICATIONS
